

Matt Summers

Software Engineer

Woodstock, GA | 470-776-3272

mtsummersx@gmail.com | <https://www.linkedin.com/in/msummx> | <https://www.github.com/msummx>

Education

DigitalCrafts | Full-Stack Software Development Program | Aug 2022 – Nov 2022

Immersive bootcamp covering Python, HTML, CSS, JavaScript, with an emphasis on frameworks such as React and server-side technologies such as Node.js, Express and Sequelize.

West Virginia University | International Studies | Sep 2016 – May 2018

Member of the Model United Nations club, recipient of Distinguished Delegation and Outstanding Position Paper awards at various international conferences.

Projects

Supernova Cantina | [GitHub](#) | [Project](#) | Oct 2022

Supernova Cantina is a retro sci-fi themed bar simulation game that utilizes Express endpoints to render pages and a Sequelize database to store user login information and inventories so a game can be resumed even after log-out. My primary role on the project involved most of the front-end design, registration and login endpoints, and the basic logic for running the simulation.

Hollywoof | [GitHub](#) | [Project](#) | Sep 2022

Hollywoof is a dog themed movie recommendation app that utilizes The Movie Database API to generate selections based on a short quiz. For this project I was mostly responsible for project management, the underlying logic for the quiz and how it would impact the API call, and DOM manipulation to keep the project as a single paged application.

Dinner & A Show | [GitHub](#) | [Project](#) | Sep 2022

Dinner & A Show is an app to help you plan a perfect night out. Built using React and Redux, the app will prompt for a date range and location and return various events from the Ticketmaster API. Once the user adds an event to their plan, the app will then render a list of restaurants with their proximity to the event venue. From there, the user can create a plan with an event and a restaurant and email themselves a reminder of their selections.

Skills

HTML, CSS, Python, JavaScript, Debugging, Node.js, Agile Methodologies, Scrum, Express.js, PostgreSQL, React, Retail Banking, Sales, Client Relations, Project Management

Professional Experience

Truist (Formerly SunTrust) | Teller/Relationship Banker | Apr 2019 – Present

Over the course of my time with Truist, I have held several positions within the retail banking side and worked tirelessly through the pandemic and merger to make the transition as seamless as possible for our clients. I maintained a results-driven mindset at one of the busiest branches in the footprint, assisting my team in surpassing our goals each quarter. I've had experience with cash handling, communicating effectively as a team, finding the right product to recommend to clients, loan processing, and supporting clients through app related issues during the system transition.
